About

4. Choose either instructor’s name (such as Miller, Kim) or department (such as Art History from the author name list and the class name from the Folders (such as AH101)

**Slideshows**

Slideshow Author:

Folder:

5. Click on a slideshow name to view images in a slide viewer

6. "Print view" creates a printable list including thumbnails of images and their accompanying descriptive information.
7. "Flash cards" creates a list including larger images with their accompanying descriptive information that is suitable for printing or for studying online

## How to search in MDID:

1. After logging in, click on Search (under Resources)

2. Select the collection you wish to search and type in your search using the fields below the collection choice. (ISIS is the main collection for Wheaton's current collection of art images.)

Collections to search:

- African and Pacific Islands Fieldwork
- Archives: Wheaton Account Books
- Baker's Historical Images
- Early Modern representations of the New World
- Favorites
- Grand Tour Ephemera: Archives and Special Collecti
- ISIS
- My Images
- NASA Image eXchange (NIX)
- Personal Images
- Shared Images
- Theatre Studies & Dance

3. At the top of the search result screen you can control how many images appear on a page, as well as how the images in the found set are sorted and how much information you want to show.
4. Clicking on an image opens it in a viewer
5. Clicking on the "download" icon will show you the high resolution version of the image in a separate window.
6. Click the note icon to add your own personal notes about an image.

Selected

7. Additional searching tips:

*(quotes used below are for clarity only and should **not** be used in MDID)*

--Using a tilde after a search term will return terms that are similar

**Example:** entering “picaso~” will find “Picasso” as well as similar terms

--Using a plus sign as a prefix for terms will return only records that have those terms.

**Example:** entering “+houses +mansions” into the subject field will return only those records that have been subject keyworded with both

--Using a minus sign as a prefix will exclude records using the denoted term.

**Example:** entering “houses –mansions” into the subject field will find all records keyworded with “houses” but will exclude those keyworded with “mansions

--Using the asterisk as a wildcard allows searches to be carried out on all characters the asterisk may represent in the string.

**Examples:** searching for “M\*net” in the Creator field will return works created by both “Manet”and “Monet”, while searching for “Japan\*” in the subject field will return records keyworded as either “Japan” or “Japanese”
